## Press Release

### **GRAND HALL® INTRODUCES NEW DIRECT VENT ETERNAL HYBRID™**

**DALLAS (February 2008)** –Grand Hall® unveils its latest product introduction with the Eternal Direct Vent, a new water heating system that directly intakes and exhausts air outside the home allowing for cleaner indoor air quality. Mirroring the technological capacity of the existing Eternal® models, the new Eternal Direct Vent models combine the best components of both tank and tankless water heating units but without the limitations. Available third quarter 2008, the direct vent models offer sealed combustion, increased run lengths for venting, operates more quietly than other systems, uses twin PVC venting and offers an optional remote control for the digital control pad.

"Eternal Direct Vent is ideal for many regions of the country where most homeowners do not have a basement to store their water heater," states Paul Home, Eternal Product Manager for Grand Hall. "With Eternal Direct Vent, the homeowner or builder can locate Eternal on the main floor and not worry about oxygen depletion in the home."

The Eternal Direct Vent models are designed to pull outside air into the Eternal combustion chamber rather than use ambient air inside your home. The turbo fan then forces exhaust air outside using the secondary PVC vent. Eternal safeguards against backdraft of any of the gases returning into the home. In addition, the direct vent model is exceptional in commercial applications where there is more than one appliance competing for indoor air use. It is also suitable in residential cases where vertical venting is not possible.

The advanced technology of Eternal's Hybrid Water Heaters provides consistent hot water on-demand, and the products are engineered to out-perform all other water heaters in the market. Using patented counter-flow design and a multi-pass heat exchanger, Eternal maintains consistent pressure and temperature while supplying endless hot water. Eternal is the only hybrid system that offers the best of tank and tankless technologies in one smart unit. Moreover, plumbers applaud Eternal because of the ease of installation, and due to the product being also PVC ventable.
